This automatic cell insertion machine is designed for cylindrical cell production and is equipped with high-precision core and shell diameter testing equipment.

The EV Cylindrical Battery Module PACK Assembly Line is a state-of-the-art automated system designed for assembling cylindrical battery cells into modules and complete PACKs.

Digatron Systems" cylindrical cell pilot assembly line includes a complete series of stations, from electrode cutting and cell winding toward tabs welding, cell filling and sealing.

Automatic Li-ion battery pack production line is an automated assembly line from cylindrical li-ion cells to semi-finished li-ion battery packs which are ready to connect with BMS.

CCS assembly offers precise and reliable solutions for contacting battery cells. It can be integrated as a stand-alone production line or as a pre-assembly process in the final assembly of the battery module.

Turret mechanism: the shell insertion/electrode penetration welding machine uses a turret mechanism, with a single machine cycle time of up to 280 PPM. Electrode pole penetration laser welding: uses

This system of Xlaowei is suitable for the pilot production scale of cylindrical batteries, with a production capacity of 40-70ppm/min.

The Automatic Cylindrical Cell Can Grooving Machine is a specialized manufacturing equipment used to create precise grooves, crimps, or beads on the metal casing (can) of cylindrical lithium-ion battery

Automatic insertion pin for cylindrical solar container lithium battery

Turnkey assembly line systems for prismatic, cylindrical, and pouch battery packs ? engineered for high-throughput, precision and consistency in manufacturing operations.
