DUN-SOLAR PPE+ is a multi-layered all-polyester film lamination designed to be used as the backsheet for photovoltaic solar panels. It acts as a durable protective barrier for the electronic components

We offer a wide range of engineered speciality films which are suitable for use in both rigid and flexible thin film photovoltaic modules, either as deposition substrates for the active layer or as the basis for

Polyester PEN films offer a unique blend of light transparency and exceptional environmental protection for flexible, thin-film solar cells. Learn more.

Polyester films can be used in a variety of constructions that are either mounted on the back of photovoltaic solar modules (crystalline) or used as a part of the construction for coated flexible

In this blog, we profile the Top 10 Companies in the Photovoltaic Polyester Film Industry ?a mix of global chemical giants, specialized film manufacturers, and regional leaders

Coveme develops and manufactures multilayer and monolayer polymer laminates for the protection of solar panels. These laminates, marketed under the company's dyMat® brand, provide electrical

These combine our tried-and-tested cell layers with a special UV-stable polyester film that is designed to be reliable when used in the outer layer in line with the discerning Krempel standards.

We offer both crystal-clear polyester films and white opaque PET film for solar applications. Crystal clear PV films allow a lot of light to pass through and are therefore very suitable as a front film or

3M? EPE Film is a multi-layer film product consisting of an EVA layer bonded to both sides of a

Solar photovoltaic panel polyester film

polyester film. This film can be easily incorporated into the laminated stack of materials in a

Polyester films are used as a protective barrier that shields solar cells from harmful ultraviolet rays. This use ensures panels retain their efficiency over 25+ years.
